

1. Module details

Module name

Install electrical/electronic apparatus – *Refrigeration and air conditioning* work performance

Module duration

The time taken to complete this module will vary depending on the opportunities in the work place for student's to develop their skills and the method used to obtain evidence of competent performance. Where evidence is obtained through formalised assessment event(s) under simulated conditions it would normally take a student 4 hours to successfully complete the module.

Module code

NEWP106e

Discipline code

2. Module purpose

This module provides methods and criteria for gathering evidence that shows a person has achieved the levels of performance specified in Unit “NES106e Install electrical/electronic apparatus – *Refrigeration and air conditioning*”.

3. Prerequisites

This module shall be undertaken in conjunction with modules that provide the knowledge and skills underpinning performance.

4. Relationship to competency standards

This module supports Unit “NES106e Install electrical/electronic apparatus - *Refrigeration and air conditioning*” of the Electrotechnology Competency Standard

5. Assessment strategy

Assessment methods

Evidence of competent performance may be gathered from real work activities, which are recorded by the use of work reports, logbooks, profiles or portfolios. The student's immediate supervisor shall confirm the accuracy of the evidence the student presents in this way. The supervisor must be competent in the area.

Conditions of assessment

Evidence of competent performance can be gathered from the workplace or a simulated work environment. A simulated environment would necessarily include equipment and wiring systems similar to those encountered in a real workplace. As well as the generic aspects of competency, assessment should take into account variations between particular industry sectors and different enterprises. For example equipment used in process industry will be different in some respects to that used in mining.

Assessment criteria

In judging work performance it is essential that evidence regarding the following aspects of competency is considered.

- **Performance is autonomous and to requirements and occurs on at least 2 occasions for each of the following elements:**
 - Plan and prepare for installation
 - Install apparatus
 - Inspect and notify completion of work
- **and relation to all of the following apparatus:**

Compressors; Condensers; Condensing Units; Evaporators; Refrigerant flow controls; Cycling controls; Safety controls; Refrigerant accessories

Compressors and Condensers or Condensing units plus the five other apparatus must be appropriately demonstrated on-the-job in real work experience.
- **applying techniques, procedures, information and resources relevant to performance.**

Judgement should be made on evidence gathered from a number of events and over a period showing the development of competent work performance.

Resource requirements

Resources should be sufficient for participants to carry out activities, from which evidence may be gathered, on an individual basis. This will include access to tools, equipment, standards and other documents that are necessary to perform the activities required.

Occupational health and safety requirements

A safe and healthy environment will be provided for participants and assessors as well as safety procedure with regard to assessment activity.
