

## Training Packages

Under the National Quality Council (NQC) Continuous Improvement processes, Training Packages are maintained through revision of individual components - units, skills sets and qualifications.

This means that at any given time there may be versions of the Training Package in use by RTOs according to their current registration of scope.

### Current Training Package

The current version is the endorsed version published on the National Training Information Service (NTIS) to which RTOs wishing to deliver current training should refer.

### Revised version of Electrotechnology Training Package

Revised versions of Training Packages have not yet been published on the National Training Information Service (NTIS). Revised versions are provided so that RTOs and enterprises can prepare for the uptake of new and revised components.

Note: Training should not be undertaken using this version until it becomes the current version of the Training Package.

### Superseded Training Packages

Superseded versions have been phased out for new enrolments but some RTOs may still be using these for continuing enrolments.
